▲ Metric	Actual	Limit	Utilisation	Status
95% Expected Shortfall	\$500,132.68	\$750,000.00	66.68%	Within Limit
95% Historical VaR	\$313,857.55	\$500,000.00	62.77%	Within Limit
Adverse Stress Loss	\$9,446,953.64	\$5,000,000.00	188.94%	BREACH
Maximum Residual Position	\$88,393,861.96	\$100,000,000.00	88.39%	Within Limit

Risk observation: The simulated adverse stress scenario generates a \$9.45M loss, exceeding the illustrative \$5M stress limit. EURUSD represents the largest maximum residual exposure in the simulated trading book.

Risk limits and stress scenarios are illustrative assumptions. VaR and Expected Shortfall are calculated from the simulated event-day P&L distribution.
